

Sumeru Chougule

Cloud-DevOps Engineer

📞 7028244510 — ✉ chougulesumeru19@gmail.com — 🌐 LinkedIn — 🐙 GitHub — 📍 Pune, India

Summary

Cloud Architect and C++ Developer with 2 years of experience designing high-performance cloud-native applications and streamlining deployments through modern DevOps methodologies. Proficient in designing secure, scalable, and cost-optimized cloud solutions using **AWS** and implementing **CI/CD pipelines with Jenkins and Docker**. Proven experience in Model-Based Development (MBD) for automotive ADAS systems, leveraging **MATLAB/Simulink** and **object-oriented programming in C++**. Strong background in **Linux administration, Git/GitHub**, and **Agile methodologies**, with a track record of delivering high-quality software in collaborative, fast-paced environments.

Skills

Tech Stack: Cloud Computing, MBD

Languages: C++, Object-Oriented Programming (OOP) in C++, Shell Scripting

DevOps: Docker, Kubernetes, CI/CD, Jenkins

Operating Systems: Ubuntu Linux, Windows

Tools / Version Control: AWS, Git, GitHub, CMake, JIRA

Testing Methodologies: Model-in-the-Loop (MIL), Software-in-the-Loop (SIL)

Work Experience

Greateway Software Pvt. Ltd., Pune.

Sep 2025 – Present

Associate Engineer – Cloud and DevOps Engineer

- Leveraged **Linux commands** to automate system administration tasks, diagnose complex issues, and streamline deployment workflows in production environments.
- Configured highly available and secure cloud environments, leveraging the **AWS ecosystem** to build functional prototypes while focusing on fundamental concepts like network security and data storage optimization.
- Worked on forks, which are used in open-source development on **GitHub**.
- Created alarms and trigger points in **CloudWatch** based on thresholds and monitored the server's performance, CPU utilization, and disk usage.
- Utilized AWS CloudWatch to monitor environment for operational and performance metrics during load testing.
- Designed and maintained the Git repositories and branching and merging strategies.
- Automated **VPC Traffic Analysis** and **Threat Detection** using AWS VPC Flow Logs.
- Worked on installation of **Docker** using **Docker Toolbox** and creation of custom Docker container images, tagging and pushing the images for managing the application life cycle.
- Configured and monitored the scheduled builds and continuous builds using CI tool.

KPIT Technologies, Pune.

Dec 2023 – Jun 2025

Associate Engineer – C++ and MBD

- Completed comprehensive Genesis program training in **Model-Based Design (MBD)** utilizing **MATLAB-Simulink** and **C++**.
- Analysis of the functional specifications and business requirements.
- Prepared design and development deliverables.
- Executed the module test cases on the unit testing environment.
- Developed a strong understanding of **object-oriented programming** concepts and **Linux terminal commands**.
- Played a vital role as an automotive **C++** software developer, especially in the **ADAS** domain, developing and improving object-oriented software components (OOP) and implementing new features.
- Good experience with Jenkins and other build environment tools.
- Used **Git/GitHub** for source code control.
- Supported code builds with continuous integration tool.
- Contributed actively to an **Agile team** that produced high-fidelity mockups on time, ensuring effective collaboration and timely delivery.

Projects

Enterprise CI/CD Pipeline for High-Availability Applications

- Architected and implemented an end-to-end **CI/CD pipeline** from scratch using industry-standard DevOps tools to automate software build, testing, integration, and deployment, enabling faster, reliable, and scalable delivery for enterprise-level applications.
- Design, build, and maintain a complete CI/CD pipeline using tools like **Jenkins/GitHub Actions** to automate build, test, and deployment workflows.

- Provision and configure infrastructure, including Kubernetes clusters, virtual machines for DevOps tools (Jenkins, SonarQube, Nexus), and necessary networking for seamless tool communication.
- Automate deployment of containerized applications to a Kubernetes environment and verify successful rollouts.
- Implement monitoring solutions (e.g., Prometheus, Grafana) to track system health, performance, and pipeline outcomes, enabling proactive issue resolution.
- Document pipeline architecture, configurations, and runbooks; collaborate with development, QA, and operations teams to align workflows and troubleshoot issues.

LiDAR Simulation: Object detection and collision prediction.

- Built a LiDAR-based environmental perception system for ADAS using C++, enabling point cloud generation, processing, and real-time object detection to improve driver safety and automation.

Education

Rajarambapu Institute of Technology, Islampur, Maharashtra.

Aug 2020 – Jun 2024

Bachelor of Technology in Electronics and Telecommunication Engineering

Coursework: Basic Electronics, C++, MATLAB-Simulink

Languages

English: Professional proficiency

Hindi: Native proficiency

Marathi: Native proficiency

Kannada: Conversational proficiency
