

Sumeru Chougule

Cloud-DevOps Engineer

📞 7028244510 — ✉ chougulesumeru19@gmail.com — 🌐 LinkedIn — 🐙 GitHub — 📍 Pune, India

Summary

Devops engineer with 2 years of experience designing high-performance cloud-native applications and streamlining deployments through modern DevOps methodologies. Proficient in designing secure, scalable, and cost-optimized cloud solutions using **AWS** and implementing **CI/CD pipelines** with **Jenkins** and **Docker**. Proven experience in Model-Based Development (MBD) for automotive ADAS systems, leveraging Matlab-Simulink and object-oriented programming in C++. Strong background in **Linux administration**, **Git/GitHub**, and **Agile methodologies**, with a track record of delivering high-quality software in collaborative, fast-paced environments.

Skills

Cloud & DevOps: Cloud Computing, DevOps, AWS

Programming Languages: Bash/Shell Scripting, C++, OOP in C++

DevOps Tools: Docker, Kubernetes, CI/CD, Jenkins, Terraform, Ansible, Prometheus and Grafana

Tools / Version Control: Git, GitHub, CMake, JIRA

Operating Systems: Ubuntu Linux, Windows

Work Experience

Greateway Software Pvt. Ltd., Pune.

Sep 2025 – Present

Associate Engineer

- Leveraged **Linux commands** to automate system administration tasks, diagnose complex issues, and streamline deployment workflows in production environments.
- Design and automate end-to-end **CI/CD pipelines using Jenkins**. Optimize build and release cycles by integrating automated testing and security scanning, reducing deployment lead times, and reducing manual intervention.
- Designed and maintained the Git repositories and branching and merging strategies.
- Containerize legacy and cloud-native applications using **Docker**, creating optimized, multi-stage build images for efficient resource utilization. Manage **Kubernetes** workloads, including Pods, Deployments, and Services, ensuring seamless scaling and resource management across environments.
- Develop and maintain modular **Terraform** scripts to automate infrastructure provisioning, ensuring environment consistency. Implement state management and version-controlled IaC practices to eliminate configuration drift and support rapid disaster recovery.
- Architect monitoring solutions using AWS-native tools or third-party stacks (e.g., **Prometheus/Grafana**) to track system reliability and latency.
- Partner with engineering teams to bridge the gap between development and operations, fostering a culture of continuous improvement and shared responsibility.

KPIT Technologies, Pune.

Dec 2023 – Jun 2025

Associate Trainee Engineer

- Completed comprehensive Genesis program training in Amazon Web Services, MBD utilizing Matlab-Simulink and C++.
- Analysis of the functional specifications and business requirements. Prepared design and development deliverables.
- Containerized ADAS LiDAR simulation environment enabling reproducible builds and cross-platform deployment.
- Executed the module test cases on the unit testing environment.
- Good experience with **Jenkins** and other build environment tools.
- Developed a strong understanding of OOP's concepts and **Linux terminal commands**.
- Played a vital role as an automotive software developer, especially in the **ADAS** domain, developing and improving object-oriented software components (OOP) and implementing new features.
- Used **Git/GitHub** for source code control.
- Supported code builds with continuous integration tool.
- Contributed actively to an **Agile team** that produced high-fidelity mockups on time, ensuring effective collaboration and timely delivery.

Projects

Enterprise CI/CD Pipeline for High-Availability Applications

- Architected and implemented an end-to-end **CI/CD pipeline** from scratch using industry-standard DevOps tools to automate software build, testing, integration, and deployment, enabling faster, reliable, and scalable delivery for enterprise-level applications.
- Design, build, and maintain a complete CI/CD pipeline using tools like **Jenkins** to automate build, test, and deployment workflows.
- Provision and configure infrastructure, including **Kubernetes** clusters, virtual machines for DevOps tools (Jenkins, SonarQube, Nexus), and necessary networking for seamless tool communication.
- Automate deployment of containerized applications to a Kubernetes environment and verify successful rollouts.
- Implement monitoring solutions (e.g., **Prometheus**, **Grafana**) to track system health, performance, and pipeline outcomes, enabling proactive issue resolution.
- Document pipeline architecture, configurations, and runbooks; collaborate with development, QA, and operations teams to align workflows and troubleshoot issues.

Education

Rajarambapu Institute of Technology, Islampur, Maharashtra.
Bachelor of Technology in Electronics and Telecommunication Engineering
Coursework: Basic Electronics, C++, MATLAB-Simulink

Aug 2020 – Jun 2024
